

SH@W, International Journal on Occupational Safety and Health, Covered by SCIE

**Research on Occupational Safety and Health by OSHRI
Globally Recognized**

- SH@W (Safety and Health at Work), the only international journal on occupational safety and health in Korea published by the Occupational Safety and Health Research Institute (OSHRI) under the KOSHA, was jointly covered by the SCIE and SSCI.

*** SCIE and SSCI**

SCIE (Science Citation Index Expanded) and SSCI (Social Science Citation Index) represent the database established by the Clarivate Analytics of the U.S. based on academic journals in the fields of scientific technology and social science, which is designed to construct database with index and citation information of researches published in academic journals after carefully selecting academic journals with significant academics contributions every year. These are widely used to review and evaluate outstanding journals worldwide.

※ Major index classifications

- * SCIE(Science Citation Index Expanded): Index and citation of journals in the fields of scientific technology

- * SSCI(Social Science Citation Index): Index and citation of journals in the fields of social science

- * A&HCI(Arts and Humanities Citation Index): Index and citation of journals in the fields of humanities and fine arts

- SH@W, the international journal created in 2010, comprehensively works on the studies of occupational safety and health throughout all fields of both scientific technology, such as engineering and medical science, and social science,

including laws, psychology and economics.

- SH@W is now fully recognized of its excellent quality as it has been covered by both KoreaMed, the largest medical study database in Korea, and SCOPUS, the world's largest journal index database.
- In December of 2016, SH@W was covered by the ESCI (Emerging Sources Citation Index), which selects prospective journals of which academic value is acknowledged from all new journals applying to be covered at the SCI level.
- o Especially when considering that there are over 120 SCI-level journals in Korea (as of February, 2018), this recent event proves that the studies conducted by the KOSHA are at the world-class level.
- o All studies published in SH@W can be viewed and cited by everyone for free through official websites* of SH@W and OSHRI.

- ☐ Jae-cheol Ko, the Director General of OSHRI, said, "From the recent event, it has been proven once again that SH@W is undoubtedly a world-class journal."
- o "The OSHRI is determined to continue contributing to the prevention of occupational accidents through its practical studies on occupational safety and health," Ko added.
